Attention:

Dear

At the meeting of May 19-21 the following decisions were made concerning the transducer and actuator indexing projects:

1. The List of Transducer Inputs and Actuator Outputs will not be broken down into four alphabetized divisions (Mechanical, Electrical, Radiant, and Chemical) but will be one alphabetized list.
2. Punches for "Active" and "Passive" will not be required since this information will be repeated in "Auxiliary Electrical Power."
3. The transducers to be listed will be limited as follows:
 - a. No classified equipment
 - b. Commercial packages only
 - c. Parallel combinations of transducers (i.e. transducers measuring two or more input variables and combining the outputs to give a signal which is a function of the two or more inputs) will not be included. Series combinations of transducers (i.e. transducers in which the output of one is the input of the next) will be included.
 - d. Transducers will not include any electrical computation network.
 - e. Commercial systems in which the characteristics of the transducer are not available will list characteristics of whole system.
 - f. Maximum size 1000 cu. in.

A sufficient number of copies have been enclosed so the project engineer may receive a copy.

Yours truly,
